

Minilab – LTS - Testplan

Testplan	Objective	Evaluation Criteria	Result	Test actions
Monthly Automated Ingestion	Verify that the server automatically triggers, downloads, and processes the monthly Belgian Edition	HTTP Status: 200 system must automatically flag the new version as active for new lookups + relegate the previous version to read-only mode		
FHIR capability	Verify that the server response format matches the FHIR R4 interface	HTTP Status: 200 Response body must parse as standard FHIR R4 JSON or XML structures. Components like resourceType, valid structural boundaries, and basic metadata envelopes must contain no schema errors.		
Multi-lingual Concept Search	Verify the server can filter, expand, and return designated ValueSets while properly delivering regional language variations (FR/NL/DE) using designations.	HTTP Status: 200 returned VS resource must contain an expanded array populated containing matching active codes		
Expression Capability & Semantic Queries	Process hierarchical + attribute based queries	HTTP Status: 200 system must successfully parse the expression, navigate the

Testplan	Objective	Evaluation Criteria	Result	Test actions
	Verify that the server can accurately process hierarchical + attribute based relationships using terminology query expressions	taxonomy, and return only the specific subsets or child concepts that dynamically match the logical constraints		
Constrained Selection	Verify that the server correctly enforces clinical boundaries by validating if a specific code belongs to a strict subset.	HTTP Status: 200 Response Body must be a 'Parameters' resource containing a 'result' parameter. The value of this parameter must be a valueBoolean set to true if the code is valid within the VS or false if the code is out of bounds		
Historical Records	Verify that the server properly retains inactive concepts from past versions, returns their correct metadata status and provides the designated replacement paths.	HTTP Status: 200 Must explicitly include a property named inactive set to valueBoolean: true (a replacedBy code is suggested)
